EDUCATION

PhD Microbiology and Immunology , Dalhousie University	2017- <i>Ongoing</i>
MSc Ecology and Evolutionary Biology , University of Toronto	2013-2015
BSc Specialist in Evolutionary Biology , University of Toronto	2009-2013

ACADEMIC AWARDS

NSERC Alexander Graham Bell CGS D Government of Canada	2017-2020
Honorary Izaak Walton Killam Predoctoral Scholarship (Level 2) The Killam Trusts	2017-2019
President's Award Dalhousie University	2017-2019
Kathryn A. Weldon Travel Award Dalhousie Medical Research Foundation	2018
Early Career Scientist Bursary International Human Microbiome Consortium	2018
NSERC Canada Graduate Scholarships Master's Program Government of Canada	2013-2014
NSERC Undergraduate Student Research Award Government of Canada	2012
Chancellor's Scholarship Trinity College, University of Toronto	2011

RESEARCH EXPERIENCE

Bioinformatician (Sept 2015 – Dec. 2016)

Integrated Microbiome Resource, Dalhousie University
Supervisors: Dr Morgan Langille and Dr Sean Myles

I was responsible for building tools and pipelines to use for analyzing a variety of different datasets. My main focuses were on analyzing microbiome data and associating mutations with phenotypes of interest.

Independent Contractor (Sept. 2015 – Dec. 2016)

I contributed to a report for Myles Consulting that described the genetic basis of carotenoid content in spinach and recommendations for a future breeding program. My work involved conducting a literature review and running bioinformatic analyses.

Master's Thesis (Sept. 2013 - July 2015)

Thesis: Inference of evolutionary forces acting on transcription factor binding sites
Department of Ecology and Evolutionary Biology, University of Toronto
Supervisor: Dr Alan Moses

My project focused on determining how natural selection causes transcription factor binding sites to change across closely related species. I used ChIP-seq data for four transcription factors from the livers of five mammals to identify binding sites genome-wide. I then analyzed substitutions and polymorphisms in these binding sites to infer the strength of natural selection.

Undergraduate Thesis (May 2012 - April 2013)

Thesis: Gene loss following whole-genome duplication in *Capsella bursa-pastoris*

Department of Ecology and Evolutionary Biology, University of Toronto

Supervisor: Dr Stephen Wright

The main goal of my project was to characterize loss-of-function mutations and investigate the early stages of gene loss following whole-genome duplication in a polyploid plant. I tested for genome-wide signatures of selection to determine whether positive selection is driving the loss of redundant gene copies. This project involved a combination of molecular work and bioinformatics.

VOLUNTEER EXPERIENCE

iGEM Mentor (May 2018 – Oct. 2018)

Supervised bioinformatic components of the Dalhousie undergrad iGEM team.

Soapbox Science Halifax Event Volunteer (16th June 2018)

Engaged with public at event to highlight the work of female scientists from across Canada.

Organizer of DalMUG Journal Club (May 2016 - *Ongoing*)

Includes choosing relevant papers for discussion, organizing the time and location and leading discussion during the Dalhousie Microbiome User Group (DalMUG) journal club. Summaries of these discussions are available at <http://dalmug.org>.

Scientific Peer-Reviewing

mSystems – 1 review

PLoS Comp Biol – 2 reviews

Volunteer Research Assistant (Jan. 2012 - May 2013)

Department of Ecology and Evolutionary Biology, University of Toronto

Responsibilities: Sorting and scoring fruit flies.

Supervisor: Dr Aneil Agrawal

Genetic Counseling Clinic Volunteer (Jan. - April 2012)

Mount Sinai Hospital, Toronto, ON

Responsibilities: Contributed to building family pedigrees of disease risk.

Supervisor: Seema Panchal

TEACHING EXPERIENCE

Canadian Bioinformatics Workshop (CBW) instructor and teaching assistant

(June 5-7, 2018 at the Ontario Institute for Cancer Research in Toronto)

I presented a lecture on the major classes of bioinformatic tools used for taxonomic and functional profiling of shotgun metagenomics data and developed a tutorial to complement this lecture. I was also a teaching assistant for all tutorials presented at this 3-day workshop.

Bioinformatic Tutorial Developer (Sept. 2015 – Oct. 2017)

While working as a bioinformatician in the Langille lab I developed several online tutorials to teach researchers how to analyze microbiome data. These tutorials were presented at several international conferences and have been used to train hundreds of trainees.

Module Instructor (Nov. – Dec. 2016)

I lectured and developed a four-week graduate-level module entitled “Introduction to Python programming for biologists”. I was responsible for the structure and the content of this short course. I lectured two classes each week and created all the quizzes and assignments for the students (3 quizzes and 4 assignments). This module was one of several modules offered as part of BIOL5705 (Graduate Modules class) in the Biology department of Dalhousie University.

Teaching Assistant (Sept. – Dec. 2013 and Sept. – Dec. 2014)

I supervised laboratory classes for BIO120 (Adaptation and Biodiversity) at the University of Toronto, which complemented key lecture topics.
